

Amendments to the Claims:

1. (currently amended) A supporting structure, comprising:

an elongate body member made of flexible material and being

bendable and foldable [with unlimited angle] into a plurality of shapes while retains the bent shape until subsequently reposition;

an exterior covering member, directly formed on the elongate body member by an injection mold process, wherein the exterior covering member exposes two ends of the elongate member and has a bellow configuration, wherein the exterior covering member has a diameter gradually reduced from two ends to a center thereof;

a suction device, connected to one of the exposed end of the elongate body member; and

a holding device, connected to the other exposed end of the elongate body member.

2. (original) The structure according to Claim 1, wherein the flexible material includes aluminum material.

3. (original) The structure according to Claim 1, wherein the exterior covering member includes soft plastic material.

4. (canceled).

5. (original) The structure according to Claim 1, wherein the elongate body member has a roughened exterior surface.

6. (original) The structure according to Claim 1, wherein the suction device includes a suction disk.
